The Masonry Industry
Offers Excellent Career
Opportunities

Becoming a mason is a career decision that offers diverse opportunities.

A highly skilled craft, masonry requires precision and artistic skill. Most impressive buildings across the US are made of masonry and masons who work on those buildings take great pride in their work. Masonry buildings stand the

test of time. No other material leaves as lasting an impression of strength, quality and substance as that conveyed by brick, block and stone.

What does a mason do?

Masons work with a variety of building materials including brick, block and glass block, tile, terra cotta, natural and cast stone. The work ranges from laying a wall to constructing building exteriors to high rise buildings using a variety of these materials. The work is physical and involves the use of hand tools, power tools and material moving equipment. Brick and block are laid by hand, requiring the skill of a craftsman, who is a true artist.

Training

To become a journeyman mason, you must complete an approved apprenticeship training program. Secondary school programs at Vocational Technical Centers provide approved training to allow a student to work for a mason contractor at the entry level immediately after graduation or go on to a post-secondary school for further training.

Earn Good Wages

Skilled masons earn among the highest wages in the construction trades. Often a Journeyman bricklayer will even earn more in wages than a college graduate. As with all careers, wages depend on the geographic area and employer.

Valuable Benefits

Most mason contractors are competitive when it comes to providing benefits for their employees. Bricklayers often receive health and dental insurance, vacation and sick leave, a 401K or other retirement plan and additional benefits.

Job Security

The masonry industry is facing a shortage of skilled masons. Students who successfully complete a training program are in high demand for jobs. The skills of a mason can never be replaced by a machine, so skilled masons can look forward to a lucrative career for years to come!

Advancement Opportunities

Masonry-related careers are available at several work levels, including management positions:

- Job-site Supervisor or Foreman
- Quality Control Technician
- Superintendent
- Estimator
- Project Manager
- Mason Contractor
- Masonry Instructor

While additional training may be necessary for some of these careers, knowledge of the craft will contribute to your success. Students with ambitions of going to college can take classes to enhance business and marketing skills.
